Using Statistics in the Social and Health Sciences with SPSS and Excel Martin Lee Abbott

Provides a step-by-step approach to statistical procedures to analyze data and conduct research, with detailed sections in each chapter explaining SPSS® and Excel® applications

This book identifies connections between statistical applications and research design using cases, examples, and discussion of specific topics from the social and health sciences. Researched and class-tested to ensure an accessible presentation, the book combines clear, step-by-step explanations for both the novice and professional alike to understand the fundamental statistical practices for organizing, analyzing, and drawing conclusions from research data in their field.

The book begins with an introduction to descriptive and inferential statistics and then acquaints readers with important features of statistical applications (SPSS and Excel) that support statistical analysis and decision making. Subsequent chapters treat the procedures commonly employed when working with data across various fields of social science research. Individual chapters are devoted to specific statistical procedures, each ending with lab application exercises that pose research questions, examine the questions through their application in SPSS and Excel, and conclude with a brief research report that outlines key findings drawn from the results. Real-world examples and data from social and health sciences research are used throughout the book, allowing readers to reinforce their comprehension of the material.

Using Statistics in the Social and Health Sciences with SPSS® and Excel® includes:

• Use of straightforward procedures and examples that help students focus on understanding of analysis and interpretation of findings

• Inclusion of a data lab section in each chapter that provides relevant, clear examples

• Introduction to advanced statistical procedures in chapter sections (e.g., regression diagnostics) and separate chapters (e.g., multiple linear regression) for greater relevance to real-world research needs

Emphasizing applied statistical analyses, this book can serve as the primary text in undergraduate and graduate university courses within departments of sociology, psychology, urban studies, health sciences, and public health, as well as other related departments. It will also be useful to statistics practitioners through extended sections using SPSS® and Excel® for analyzing data.

Martin Lee Abbott, PhD, is Professor of Sociology at Seattle Pacific University, where he has served as Executive Director of the Washington School Research Center, an independent research and data analysis center funded by the Bill & Melinda Gates Foundation. Dr. Abbott has held positions in both academia and industry, focusing his consulting and teaching in the areas of statistical procedures, program evaluation, applied sociology, and research methods. He is the author of *Understanding Educational Statistics Using Microsoft Excel® and SPSS®, The Program Evaluation Prism: Using Statistical Methods to Discover Patterns,* and *Understanding and Applying Research Design,* also from Wiley.

From reader reviews:

Helen Turner:

Book is to be different for every single grade. Book for children until eventually adult are different content. As we know that book is very important for all of us. The book Using Statistics in the Social and Health Sciences with SPSS and Excel seemed to be making you to know about other expertise and of course you can take more information. It is rather advantages for you. The reserve Using Statistics in the Social and Health Sciences with SPSS and Excel is not only giving you much more new information but also for being your friend when you sense bored. You can spend your own personal spend time to read your guide. Try to make relationship with all the book Using Statistics in the Social and Health Sciences with SPSS and Excel. You never truly feel lose out for everything if you read some books.

Ruben Jenkins:

The experience that you get from Using Statistics in the Social and Health Sciences with SPSS and Excel may be the more deep you rooting the information that hide inside the words the more you get considering reading it. It doesn't mean that this book is hard to know but Using Statistics in the Social and Health Sciences with SPSS and Excel giving you excitement feeling of reading. The copy writer conveys their point in selected way that can be understood by means of anyone who read the idea because the author of this guide is well-known enough. This kind of book also makes your own personal vocabulary increase well. Therefore it is easy to understand then can go along, both in printed or e-book style are available. We suggest you for having this kind of Using Statistics in the Social and Health Sciences with SPSS and Excel instantly.

John Harris:

Information is provisions for individuals to get better life, information currently can get by anyone from everywhere. The information can be a know-how or any news even restricted. What people must be consider while those information which is inside former life are hard to be find than now is taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you obtain the unstable resource then you understand it as your main information we will see huge disadvantage for you. All of those possibilities will not happen with you if you take Using Statistics in the Social and Health Sciences with SPSS and Excel as the daily resource information.

Steven Evans:

Don't be worry should you be afraid that this book can filled the space in your house, you might have it in e-book technique, more simple and reachable. This Using Statistics in the Social and Health Sciences with SPSS and Excel can give you a lot of close friends because by you considering this one book you have thing that they don't and make a person more like an interesting person. This specific book can be one of one step for you to get success. This e-book offer you information that possibly your friend doesn't learn, by knowing more than various other make you to be great persons. So , why hesitate? We need to have Using Statistics in

the Social and Health Sciences with SPSS and Excel.
