Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics)

Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics)

The practice of modern medicine and biomedical research requires sophisticated information technologies with which to manage patient information, plan diagnostic procedures, interpret laboratory results, and carry out investigations. Medical Informatics provides both a conceptual framework and a practical inspiration for this swiftly emerging scientific discipline at the intersection of computer science, decision science, information science, cognitive science, and biomedicine. Now revised and in its second edition, this text meets the growing demand by practitioners, researchers, and students for a comprehensive introduction to key topics in the field. Authored by leaders in medical informatics and extensively tested in their courses, the chapters in this volume constitute an effective textbook for students of medical informatics and its areas of application. The book is also a useful reference work for individual readers needing to understand the role that computer can play in the provision of clinical services and the pursuit of biological questions. The volume is organized so as first to explain basic concepts and then to illustrate them with specific systems and technologies. The book has been extensively revised and updated for this second edition, and new topics include: ; Standards in Medical Informatics ; Ethics of Health Informatics: Users, Standards, and Outcomes ; Evaluation and Technology Assessment ; Public Health and Consumer uses of Health Information: Education, Research, Policy, Prevention, and Quality Assurance ; Bioinformatics Edward H. Shortliffe, M.D., Ph.D., is professor and chair of the department of Medical Informatics at Columbia University's College of Physicians and Surgeons. A member of the Institute of Medicine and a regent to the American College of Physicians-American Society of Internal Medicine, he is also a fellow of the American College of Medical Informatics and serves on the President's Information Technology advisory Committee. Leslie E. Perreault, M.S., is a director at the First Consulting Group in New York City. A graduate of Stanford University's training program in medical informatics, she has extensive experience as a consultant to healthcare organizations, especially regarding clinical systems and their integration to the enterprise. Gio Wiederhold, Ph.D., is professor of computer science at Stanford University, with courtesy appointments in Medicine and Electrical Engineering . He is a fellow of the American College of Medical Informatics, the IEEE, and the ACM.

From reader reviews:

Ann Wren:

Information is provisions for individuals to get better life, information presently can get by anyone at everywhere. The information can be a knowledge or any news even a concern. What people must be consider when those information which is inside former life are challenging to be find than now could be taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you obtain the unstable resource then you understand it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics) as the daily resource information.

Rodney Richardson:

Do you have something that you prefer such as book? The reserve lovers usually prefer to opt for book like comic, quick story and the biggest one is novel. Now, why not attempting Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics) that give your entertainment preference will be satisfied by reading this book. Reading habit all over the world can be said as the method for people to know world far better then how they react towards the world. It can't be mentioned constantly that reading routine only for the geeky man or woman but for all of you who wants to always be success person. So , for every you who want to start looking at as your good habit, you are able to pick Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics) become your current starter.

Carmen Vasquez:

As a scholar exactly feel bored to reading. If their teacher expected them to go to the library or to make summary for some book, they are complained. Just minor students that has reading's heart or real their interest. They just do what the teacher want, like asked to the library. They go to right now there but nothing reading really. Any students feel that examining is not important, boring and can't see colorful photos on there. Yeah, it is to become complicated. Book is very important for you personally. As we know that on this time, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. So , this Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics) can make you experience more interested to read.

Dixie Jones:

What is your hobby? Have you heard this question when you got pupils? We believe that that question was given by teacher with their students. Many kinds of hobby, Every individual has different hobby. So you know that little person similar to reading or as looking at become their hobby. You need to know that reading is very important and also book as to be the factor. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You see good news or update about something by book. Different categories of books that can you take to be your object. One of them is this Medical Informatics: Computer

Applications in Health Care and Biomedicine (Health Informatics).
